Mental illness affects on physical health

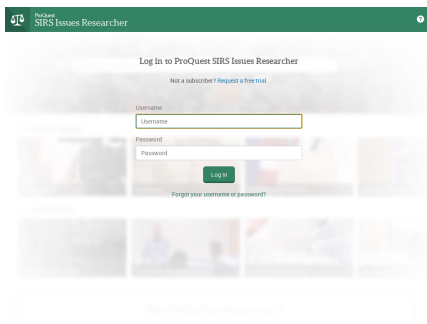

Around the world, people with mental illness die up to 20 years earlier than the general population, and a comprehensive new report suggests that governments and health care providers must do more to stop the deaths.

Stigma, Education, and Understanding in Mental Illness

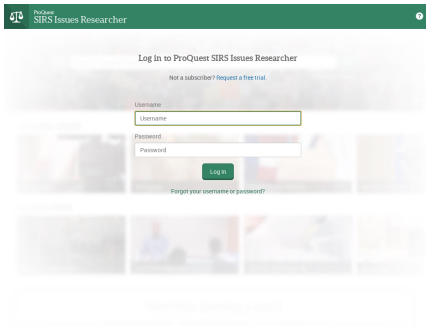

Professor David Porteous notes that there is an unnecessary stigma surrounding psychiatric disorders, which impedes our understanding.

National Institute of Mental Health: Child and Adolescent Mental Health

Developed as a public service by the National Institute of Mental Health, this Web site contains a wealth of materials that will be very useful to mental health practitioners, parents, and those who work with young people in any capacity. First-time visitors will want to read the brief notes on the mental health of children and adolescents, as well as the section dealing with the treatment of children with mental disorders, which answers some basic questions about various disorders and psychotropic medicines commonly prescribed to treat these conditions. The Educational Materials section provides a number of booklets, fact sheets, and additional Web sites on such conditions as autism, depression, learning disabilities, and Attention Deficit Hyperactivity Disorder (ADHD). Researchers and health care professionals will want to examine the sections devoted to current research reports and multi-center collaborations, including the Child and Adolescent Research Consortium and the Child Abuse and Neglect Working Group.

Life Stress, Genes, and Depression: Multiple Pathways Lead to Increased Risk and New Opportunities for Intervention

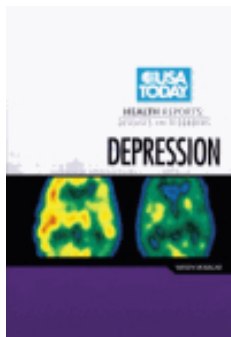

This STKE Review with 2 figures and 122 references concerns the interaction between stress, genetic factors, and vulnerability to depression. Evidence suggests that the combination of genetics, early life stress, and ongoing stress determine how an individual responds to stress and his vulnerability to psychiatric disorders, such as depression. It is likely that genetic factors and life stress contribute not only to alterations in various neurotransmitter systems, but also to the impairments of cellular plasticity and resilience that are observed in depression. Increased understanding of the specific cellular and neurochemical alterations that contribute to depression, and of the intracellular signaling pathways that underlie cellular plasticity and resilience, may lead to the identification of novel therapeutic targets and, therefore, to the development of novel antidepressant therapies.

Mental Health Matters

Mental Health Matters is a collection of various mental health articles which cover topics such as psychological disorders and treatments for mental illnesses. The site is easy to navigate and users can choose from disorders, symptoms, medications, and treatments. Once a visitor chooses a subfield from the homepage, they are provided with another set of choices which contain more specific information on the various main topics. The site is also designed so that users can search by disorder or category to find the appropriate information to answer their queries.

Depression

Wendy Moragne.

616.85 Mor

Defines depression and explains the diagnosis, treatment, and help available to sufferers of this debilitating disease.

<https://search.follettsoftware.com/metasearch/rest/v2/go/66838/details/360903>

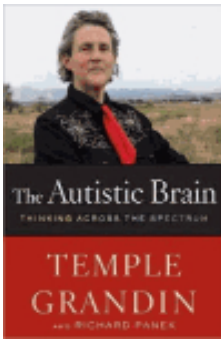

Anorexia

Stefan Kiesbye, book editor.

616.85 ANO

Authors present differing opinions on anorexia, an eating disorder, discussing how the media promotes eating disorders, how fashion glamorizes thinness, and how Internet websites encourage anorexics to accept the disorder as a lifestyle.
